SAMPLE - Fictional agency proposal

Signed — September 30, 2026

FICTIONAL SAMPLE

Fictional example generated by Plutosign. This is not a customer agreement.

Website design proposal

From: Robin Sample, Example Studio (fictional), robin@example.test

For: Avery Sample, Example Client (fictional), avery@example.test

Scope and example pricing

Design a fictional three-page website with one review round. Sample price: USD 1,200. Sample delivery: four weeks after approval.

These illustrative terms and the typed sample signature do not execute an agreement. No signing link was issued and no email was sent.

Disclosure Versions Per Signer

Email	ERCD Version	Intent Text Version
avery@example.test	v2	v1

This Certificate of Completion ("Certificate") evidences the electronic execution of the document identified above by each signer listed in the Signing Details table. Plutosign produces this Certificate as a contemporaneous business record of the signing transaction.

The electronic signatures captured by Plutosign on this document are valid and enforceable under the U.S. Electronic Signatures in Global and National Commerce Act, 15 U.S.C. §7001 (validity of electronic signatures) and §7006 (definitions), and the Uniform Electronic Transactions Act as enacted in each U.S. state, including §7 (legal recognition), §9 (attribution), and §12 (retention). Under 15 U.S.C. §7001(a)(1), a signature, contract, or record may not be denied legal effect or enforceability solely because it is in electronic form.

For each signer Plutosign recorded: identity by possession of a unique signing link delivered to the signer's email address of record; IP address as observed by Plutosign's servers at signing; browser and operating system information at signing; the timestamp of each interaction (view, sign, decline, delegate) in Coordinated Universal Time; the version of the Electronic Records Consent Disclosure each signer accepted before signing; and the verbatim version of the affirmation text each signer was shown immediately above the Sign button at their signing event. These items appear in the tables above and form an append-only, hash-chained audit log; the hash chain makes deletion or re-ordering of recorded events forensically detectable.

Document integrity. The content fingerprint identifies application document content or signing configuration at sending; it is not a hash of the completed PDF bytes. A separate stored SHA-256 hash, when available, identifies the signed PDF including its embedded certificate. That byte hash is provided on the separately downloaded Certificate of Completion and can be checked against SHA-256 recomputed over the complete signed PDF. It does not hash the separately generated certificate. Plutosign treats any mismatch as a high-severity incident, and a mismatch does not, of itself, invalidate the record.

Limitations. Plutosign captures electronic signatures meeting U.S. ESIGN/UETA standards. Plutosign does NOT, in this Certificate, represent that the signatures meet the European Union eIDAS Advanced or Qualified Electronic Signature standards, the PAdES long-term-validation profile, or industry-specific frameworks such as HIPAA, FINRA, or FDA Title 21 CFR Part 11. The signed PDF does not contain an embedded PKCS#7 / CMS cryptographic signature.

This Certificate is generated automatically and is not a legal opinion as to the enforceability of the underlying transaction. Specific
